

lesson 3

STROKE

In the first module, You can see four rectangles. Two of them have st0 class and the other two have the class st1. Open style.css file in your text editor.

1.1 You should add a fill-opacity property with the value that is equal to 1 and the stroke-opacity that is also equal to 1 inside the declaration blocks of the st0 and st1 class selectors. You should also add a stroke-width property that is equal to 20 to both classes.

1.2 Change the value of the fill-opacity property to .75 and the value of the stroke-opacity property to .5 inside the declaration block of the st1 class selector.

1.3 Reverse the order of the paint-order property that is inside the declaration block of the pnt_order__reversed class selector.

In the second module, You can see four stars. Two of them have st1 class and the other two have the class st2.

2.1 Open style.css file in your text editor.

2.2 Add to the st1 class the opacity property that is equal to 75%. Then add stroke-opacity and fill-opacity properties that are both equal to 75% to the st2 class.

2.3 Then change the paint-order property value inside the declaration block of the pnt_order__reversed class selector. The stroke layer should be on the very bottom.
